```

Pharmaceutical composition for treating asthma, has antioligonucleotide containing less percentage of adenosine, nucleic acids associated with lung airway or lung dysfun

has antisense

dysfunction,

targeted to

bronchodilating

The CC oligonuclectides are derived from a gene encoding or regulating CC dysfunction or cancer and can be anti-sense to the corresponding mRNA. CC The invention also describes a kit, that comprises: (a) a delivery CC device, in separate containers, (b) the oligonuclectides, (c) cinstructions for adding a carrier and for use of the kit. The composition of the invention has antiallergic, antiinflammatory, antiasthmatic, CC analgesic, hypotensive, immunosuppressive and cytostatic activity, is a beta adrenergic agonist. The composition is useful for preventing or creating a respiratory, lung or malignant disease. The administered composition composition comprises oligo and is administered to reduce the production or availability, or to increase the degradation of the target mRNA or to creduce the amount of target polypeptide present in the lungs. The CC pulmonary obstruction, and/or bronchoconstriction and/or bronchoconstriction and/or bronchoconstriction and/or bronchoconstriction and/or bronchoconstriction and/or pulmonary vasoconstriction, pulmonary obstructives pain, cystic fibrosis, allergic rhinitis, pulmonary hypertension, emphysems, chronic obstructive pulmonary disease, pulmonary content of the anti-sense oligos corresponding to the oligonuclectides into products that free adenosine into the system of the oligonuclectides into products that free adenosine into the system contents and charsely. cc surfactant depletion or hyposecretion, when administered to a mammal. The oligonucleotides are derived from a gene encoding or regulating compression of a target polypoptide associated with lung airway or lung dysfunction or cancer and can be anti-sense to the corresponding mRNA.

Cc The invention also describes a kit, that comprises: (a) a delivery compression, in separate containers, (b) the oligonucleotides, (c) instructions for adding a carrier and for use of the kit. The composition of the invention has antiallergic, antiinflammatory, antiasthmatic, comparises; hypotensive, immunosuppressive and cytostatic activity, is a beta-adrenergic agonist. The composition is useful for preventing or treating a respiratory, lung or malignant disease. The administered composition comprises oligo and is administered to reduce the production or availability, or to increase the degradation of the target mRNA or to reduce the amount of target polypoptide present in the lungs. The composition, allergies and/or bronchoconstriction and/or lung inflammation, allergies and/or surfactant hypoproduction are associated with a disease or condition such as pulmonary vasoconstriction, comprises evaluation, such as pulmonary vasoconstriction, pulmonary disease, pulmonary composition, emphysema, chronic obstructive pulmonary disease, pulmonary transplantation rejection, pulmonary infections, bronchitis or cancer. Cc thymidines present in the target RNA serves to prevent the breakdown of the oligonucleotides into products that free adenosine into the system ceg., lung, brain, heart, kidney, etc, tissue environment and thereby, to prevent any unwanted effects due to it

                                                                                                                                                                                                                                                                                                                                                                                                                                      CC comprising oligonucleotides, effective for alleviating
CC comprising oligonucleotides, effective for alleviating
CC reducing adenosine sensitivity, levels of adenosine (A) or (A) receptors,
CC surfactant depletion or hyposecretion, when administered to a mammal. The
CC oligonucleotides are derived from a gene encoding or regulating
CC expression of a target polypeptide associated with lung airway or lung
CC dysfunction or cancer and can be anti-sense to the corresponding mRNA.
CC The invention also describes a kit, that comprises: (a) a delivery
CC device, in separate containers, (b) the oligonucleotides, (c)
CC instructions for adding a carrier and for use of the kit. The composition
CC of the invention has antiallergic, antiinflammatory, antiasthmatic,
CC analgesic, hypotensive, immunosuppressive and cytostatic activity, is a
CC beta adrenergic agonist. The composition is useful for preventing or
CC treating a respiratory, lung or malignant disease. The administered
CC composition comprises oligo and is administered to reduce the production
CC or availability, or to increase the degradation of the target mRNA or to
CC reduce the amount of target polypeptide present in the lungs. The
CC inflammation allergies and/or purferent horses and alleration and/or antiastriction and/or antiastriction and/or antiastriction.
                                                                                 Query Match

                                                                                                                                                                                                       inflammation, allergies and/or surfactant hypoproduction are associated with a disease or condition such as pulmonary vasoconstriction, inflammation, allergies, asthma, impeded respiration, respiratory distress syndrome, pain, cystic fibrosis, allergic rhinitis, pulmonary hypertension, emphysema, chronic obstructive pulmonary disease, pulmonary transplantation rejection, pulmonary infections, bronchitis or cancer. The reduced adenosine content of the anti-sense oligos corresponding to thymidines present in the target RNA serves to prevent the breakdown of the oligonucleotides into products that free adenosine into the system e.g., lung, brain, heart, kidney, etc, tissue environment and thereby, to prevent any unwanted effects due to it
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Pharmaceutical composition for treating asthma, has antisense oligonucleotide containing less percentage of adenosine, targeted to nucleic acids associated with lung airway or lung dysfunction, and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  This invention describes a novel composition (a)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Claim 15; SEQ ID NO 553;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          respiratory distress syndrome; allergic rhinitis; emphysema; chronic obstructive pulmonary disease; pulmonary transplantation rejection; ss; primer.
                                                                                                                                                                   Sequence 20

CC comprising oligonucleotides, effective for alleviating comprising oligonucleotides, effective for alleviating control of the composition, respiratory tract inflammation, allergies and control of the composition of a target polypeptide associated with lung airway or lung control of the invention also describes a kit, that comprises: (a) a delivery consistent of the composition of the invention has antiallergic, antiinflammatory, antiasthmatic, in separate containers, (b) the oligonucleotides, (c) constructions for adding a carrier and for use of the kit. The composition of the invention has antiallergic, antiinflammatory, antiasthmatic, analgesic, hypotensive, immunosuppressive and cytostatic activity, is a composition comprises oligo and is administered to reduce the production of treating a respiratory, lung or malignant disease. The administered composition comprises oligo and is administered to reduce the production or availability, or to increase the degradation of the target mRNA or to reduce the amount of target polypeptide present in the lungs. The conformation, allergies and/or bronchoconstriction and/or lung conflammation, allergies and/or surfactant hypoproduction are associated with a disease or condition such as pulmonary vascoonstriction, respiratory condition such as pulmonary vascoonstriction, pulmonary conditions achieves production such as pulmonary vascoonstriction or cancer. The reduced adenosine content of the anti-sense oligos corresponding to thymidines present in the target RNA serves to prevent the breakdown of the oligonucleotides into products that free adenosine into the system ce.g., lung, brain, heart, kidney, etc, tissue environment and thereby, to prevent any unwanted effects due to it
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Human; antisense; bronchoconstriction; allergy; hyposecretion; pain; respiratory tract inflammation; adenosine sensitivity; lung; cancer; surfactant depletion; antiallergic; antiinflammatory; antiasthmatic; analgesic; hypotensive; immunosuppressive; cytostatic; cystic fibrosis; beta-adrenergic agonist; respiratory disease; pulmonary vasoconstriction; respiratory distress syndrome; allergic rhinitis; pulmonary hypertension; emphysema; chronic obstructive pulmonary disease; cancer; bronchitis; pulmonary transplantation rejection; ss; primer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Pharmaceutical composition for treating asthma, has antisense oligonucleotide containing less percentage of adenosine, targeted to nucleic acids associated with lung airway or lung dysfunction, and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        This invention

á
     comprising oligonuclectides, effective for alleviating thronchoconstriction, respiratory tract inflammation, allergies and reducing adenosine sensitivity, levels of adenosine (A) or (A) receptors, surfactant depletion or hyposecretion, when administered to a mammal. The oligonuclectides are derived from a gene encoding or regulating expression of a target polypoptide associated with lung aliway or lung dysfunction or cancer and can be anti-sense to the corresponding mRNA.

The invention also describes a kit, that comprises: (a) a delivery device, in separate containers, (b) the oligonucleotides, (c) instructions for adding a carrier and for use of the kit. The composition of the invention has antiallargic, antiinflammatory, antiasthmatic, analgesic, hypotensive, immunosuppressive and cytostatic activity; is a beta-adrenergic agonist. The composition is useful for preventing or treating a respiratory, lung or malignant disease. The administered composition comprises oligo and is administered to reduce the production con availability, or to increase the degradation of the target mRNA or to reduce the amount of target polypeptide present in the lungs. The continuation, and/or bronchoconstriction and/or lung inflammation, allergies and/or surfactant hypoproduction are associated of the disease or condition such as mulmonary vascometrictions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                RESULT 1057

SSSSSSSSSS
                                               inflammation, allergies, asthma, impeded respiration, respiratory distress syndrome, pain, cystic fibrosis, allergic rhinitis, pulmonary hypertension, emphysema, chronic obstructive pulmonary disease, pulmonar transplantation rejection, pulmonary infections, bronchitis or cancer. The reduced adenosine content of the anti-sense oligos corresponding to thymidines present in the target RNA serves to prevent the breakdown of the oligonucleotides into products that free adenosine into the system e.g., lung, brain, heart, kidney, etc, tissue environment and thereby, prevent any unwanted effects due to it
                                                                                                                                                                                                                            pulmonary
                                                                                        6

CC instructions for adding a carrier and for use of the kit. The composition
CC of the invention has antiallergic, antiinflammatory, antiasthmatic,
CC analgesic, hypotensive, immunosuppressive and cytostatic activity, is a
CC treating a respiratory, immunosuppressive and cytostatic activity, is a
CC composition comprises oligo and is administered to reduce the production
CC reduce the amount of target polypeptide present in the lungs. The
CC pulmonary obstruction, and/or bronchoconstriction and/or lung
CC inflammation, allergies and/or surfactant hypoproduction are associated
CC with a disease or condition such as pulmonary vasoconstriction,
CC inflammation, allergies asthma, impeded respiration, respiratory
CC distress syndrome, pain, cystic fibrosis, allergic rhinitis, pulmonary
CC distress syndrome, pain, cystic fibrosis, allergic rhinitis or cancer.
CC The reduced adenosine content of the anti-sense oligos corresponding to
Ct thymidines present in the target RNA serves to prevent the breakdown of
CC though brain, beart, kidney, etc, tissue environment and thereby, to
CC prevent any unwanted effects due to it
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Query Match

This invention describes a novel composition (a) a first active agent, comprising oligonucleotides, effective for alleviating comprising oligonucleotides, effective for alleviating comprising oligonucleotides, respiratory tract inflammation, allergies and composition and ensistivity, levels of adenosine (A) or (A) receptors, surfactant depletion or hyposecretion, when administered to a mammal. The coligonucleotides are derived from a gene encoding or regulating capturession of a target polypeptide associated with lung alivay or lung dysfunction or cancer and can be anti-sense to the corresponding mRNA.

Composition also describes a kit, that comprises: (a) a delivery composition is separate containers, (b) the oligonucleotides, (c) instructions for adding a carrier and for use of the kit. The composition of the invention has antiallergic, antiinflammatory, antiasthmatic, can analgesic, hypotensive, immunosuppressive and cytostatic activity, is a beta-adrenergic agonist. The composition is useful for preventing or treating a respiratory, lung or malignant disease. The administered composition comprises oligo and is administered to reduce the production or reduce the amount of target polypeptide present in the lungs. The pulmonary obstruction, and/or bronchoconstriction and/or lung pulmonary vasoconstriction, allergies and/or surfactant hypoproduction are associated with a disease or condition such as pulmonary vasoconstriction, respiratory distartes syndrome, pain, cystic fibrosis, allergic rhinitis, pulmonary hypertension, emphysema, chronic obstructive pulmonary disease, pulmonary contents and content of the anti-sense oligos corresponding to the oligonucleotides into products that free adenosine into the system c., lung, brain, heart, kidney, etc., tissue environment and thereby, to prevent any unwanted effects due to it

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             CC comprising oligonucleotides, effective for alleviating CC bronchoconstriction, respiratory tract inflammation, allergies and CC reducing adenosine sensitivity, levels of adenosine (A) or (A) receptors, CC surfactant depletion or hyposecretion, when administered to a mammal. The CC oligonucleotides are derived from a gene encoding or regulating CC dysfunction or cancer and can be anti-sense to the corresponding mRNA. CC The invention also describes a kit, that comprises: (a) a delivery CC device, in separate containers, (b) the oligonucleotides, (c) instructions for adding a carrier and for use of the kit. The composition of the invention has antiallergic, antiinflammatory, antiasthmatic, CC device, in separatery, lung or malignant disease. The administered composition comprises oligo and is administered to reduce the production of treating a respiratory, lung or malignant disease. The administered composition composition, and/or bronchoconstriction and/or lung composition of availability, or to increase the degradation of the target mRNA or to reduce the amount of target polypeptide present in the lungs. The composition, allergies, asthma, impeded respiration, respiratory composition such as pulmonary vasoconstriction are associated composition, allergies, asthma, impeded respiration, respiratory composition spiratory of transplantation, emphysema, chronic obstructive pulmonary disease, pulmonary transplantation rejection, pulmonary infections, bronchitis or cancer. CC the oligonaced adenosine content of the anti-sense oligos corresponding to the composition of the target many of the target many of the breakdown of the many brain, heart, kidney, etc, tissue environment and thereby, to prevent any unwanted effects due to it
                                                                                                                                                                                                                                                                                    RESULT 1061

The invention also describes a kit, that comprises: (a) a delivery device, in separate containers, (b) the oligonucleotides, (c) instructions for adding a carrier and for use of the kit. The composition of the invention has antiallergic, antiinflammatory, antiasthmatic, analgesic, hypotensive, immunosuppressive and cytostatic activity, is a beta-adrenergic agonist. The composition is useful for preventing or treating a respiratory, lung or malignant disease. The administered composition comprises oligo and is administered to reduce the production or availability, or to increase the degradation of the target mRNA or to reduce the amount of target polypeptide present in the lungs. The pulmonary obstruction, and/or bronchoconstruction and/or lung application of the second of the composition of the second o
                                   inflammation, allergies and/or surfactant hypoproduction are associated with a disease or condition such as pulmonary vasoconstriction, inflammation, allergies, asthma, impeded respiration, respiratory distress syndrome, pain, cystic fibrosis, allergic rhinitis, pulmonary hypertension, emphysema, chronic obstructive pulmonary disease, pulmonary transplantation rejection, pulmonary infections, bronchitis or cancer. The reduced adenosine content of the anti-sense oligos corresponding to thymidines present in the target RNA serves to prevent the breakdown of the oligonucleotides into products that free adenosine into the system e.g., lung, brain, heart, kidney, etc, tissue environment and thereby, to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         bronchoconstriction, respiratory tract inflammation, allergies and reducing adenosine sensitivity, levels of adenosine (A) or (A) receptor suffectant depletion or hyposeries and administered to a mammal. I oligonucleotides are derived from a gene encoding or regulating expression of a target polypeptide associated with lung airway or lung dysfunction or cancer and can be anti-sense to the corresponding mRNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            comprising oligonucleotides,

CC bronchoconstriction, respiratory tract inflammation, allergies and CC reducing adenosine sensitivity, levels of adenosine (A) or (A) receptors, CC surfactant depletion or hyposecretion, when administered to a mammal. The Coligonucleotides are derived from a gene encoding or regularing CC expression of a target polypeptide associated with lung airway or lung CC dysfunction or cancer and can be anti-sense to the corresponding mRNA. CC The invention also describes a kit, that comprises: (a) a delivery CC device, in separate containers, (b) the oligonucleotides, (c) instructions for adding a carrier and for use of the kit. The composition of the invention has antiallergic, antiinflammatory, antiasthmatic, CC analgesic, hypotensive, immunosuppressive and cytostatic activity, is a beta-adrenergic agonist. The composition is useful for preventing or CC treating a respiratory, lung or malignant disease. The administered CC composition comprises oligo and is administered to reduce the amount of target polypeptide present in the lungs. The CC inflammation, allergies and/or bronchoconstriction and/or lung corresponding to the disease or condition such as pulmonary vasoconstriction, cC inflammation, allergies, asthma, impeded respiration, respiratory construction, pulmonary disease, pulmonary disease, pulmonary adenorary of the anti-sense of the content.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        respiratory tract inflammation; adenosine sensitivity; lung; cancer; surfactant depletion; antiallergic; antiinflammatory; antiasthmatic; analgesic; hypotensive; immunosuppressive; cytostatic; cystic fibrosis; beta-adrenergic agonist; respiratory disease; pulmonary vasoconstriction; respiratory distress syndrome; allergic rhinitis; pulmonary hypertension; emphysema; chronic obstructive pulmonary disease; cancer; bronchitis; pulmonary transplantation rejection; ss; primer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Pharmaceutical composition for treating asthma, has antisense oligonucleotide containing less percentage of adenosine, targunucleic acids associated with lung airway or lung dysfunction
                                                       The reduced adenosine content of the anti-sense oligos corresponding to thymidines present in the target RNA serves to prevent the breakdown of the oligonucleotides into products that free adenosine into the system e.g., lung, brain, heart, kidney, etc, tissue environment and thereby,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    This invention describes a novel composition (a) a first active agent, comprising oligonucleotides, effective for alleviating
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           31-OCT-2002
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 WO200285309-A2.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       24-APR-2001; 2001US-0286036P

                     CC composition collections, effective for alleviating composition collections, respiratory tract inflammation, allergies and cc reducing adenosine sensitivity, levels of adenosine (A) or (A) receptors, cc surfactant depletion or hyposecretion, when administered to a mammal. The colligonuclectides are derived from a gene encoding or regulating cc expression of a target polypeptide associated with lung airway or lung cypression or cancer and can be anti-sense to the corresponding mRNA. cc fine invention also describes a kit, that comprises: (a) a delivery collected, in separate containers, (b) the oligonuclectides, (c) instructions for adding a carrier and for use of the kit. The composition of the invention has antiallergic, antiinflammatory, antiasthmatic, cc analgesic, hypotensive, immunosuppressive and cytostatic activity, is a cc treating a respiratory, lung or malignant disease. The administered composition composition composition and is administered to reduce the production or availability, or to increase the degradation of the target mRNA or to creduce the amount of target polypeptide present in the lungs. The composition substruction, and/or bronchoconstriction and/or lung inflammation, allergies and/or surfactant hypoproduction are associated with a disease or condition such as pulmonary vasoconstriction.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Best Local Similarity Matches 17; Conser

distress syndrome, pain, cystic fibrosis, allergic rhinitis, pulmonary hypertension, emphysema, chronic obstructive pulmonary disease, pulmonary transplantation rejection, pulmonary infections, bronchitis or cancer. The reduced adenosine content of the anti-sense oligos corresponding to thymidines present in the target RNA serves to prevent the breakdown of the oligonucleotides into products that free adenosine into the system e.g., lung, brain, heart, kidney, etc, tissue environment and thereby, prevent any unwanted effects due to it

KW P 유 S Matches Query Match Best Local S comprising oligonucleotides, effective for alleviating bronchoconstriction, respiratory tract inflammation, allergies and reducing adenosine sensitivity, levels of adenosine (A) or (A) receptor surfactant depletion or hyposecretion, when administered to a mammal. To oligonucleotides are derived from a gene encoding or regulating expression of a target polypeptide associated with lung airway or lung dysfunction or cancer and can be anti-sense to the corresponding mRNA. The invention also describes a kit, that comprises: (a) a delivery device, in separate containers, (b) the oligonucleotides, (c) Human; antisense; bronchoconstriction; allergy; hyposecretion; pain; respiratory tract inflammation; adenosine sensitivity; lung; cancer; surfactant depletion; antiallergic; antiinflammatory; antiasthmatic; analgesic; hypotensive; immunosuppressive; cytostatic; cystic fibrosis; beta-adrenergic agonist; respiratory disease; pulmonary vasoconstriction; respiratory distress syndrome; allergic rhinitis; pulmonary hypertension; emphysema; chronic obstructive pulmonary disease; cancer; bronchitis; pulmonary transplantation rejection; ss; primer. Pharmaceutical composition for treating asthma, has antisense oligonucleotide containing less percentage of adenosine, targeted nucleic acids associated with lung airway or lung dysfunction, and Мусе Л₩, 24-APR-2001; 2001US-0286036P WO200285309-A2 This invention describes a novel composition (a) a first active agent, bronchodilating 23-APR-2002; 2002WO-US013143 AI125651-derived oligonucleotide SEQ ID 4544. 29-JUL-2004 ABD25532; (EPIG-) ABD25532 standard; 3056 CTGGCTGTGGCCTCACAGCT 3075 17; ω EPIGENESIS PHARM INC.                                                                                           CC analgesic, hypotensive, immunosuppressive and cytostatic activity, is a cc beta-adrenergic agonist. The composition is useful for preventing or treating a respiratory, lung or malignant disease. The administered composition comprises oligo and is administered to reduce the production cc or availability, or to increase the degradation of the target mRNA or to reduce the amount of target polypeptide present in the lungs. The cc pulmonary obstruction, and/or bronchoconstriction and/or lung cc inflammation, allergies and/or surfactant hypoproduction are associated cc with a disease or condition such as pulmonary vasoconstriction.

CC inflammation, allergies and/or surfactant hypoproduction are associated cd inflammation, allergies, asthma, impeded respiration, respiratory cd distress syndrome, pain, cystic fibrosis, allergic rhinitis, pulmonary hypertension, emphysema, chronic obstructive pulmonary disease, pulmonary cc transplantation rejection, pulmonary infections, bronchitis or cancer. CC The reduced adenosine content of the anti-sense oligos corresponding to the oligonucleotides into products that free adenosine into the system ce e.g., lung, brain, heart, kidney, etc, tissue environment and thereby, to prevent any unwarted effects discounted to the content of the system content and effects discounted to the content and thereby, to prevent any unwarted effects discounted to the system content and effects discounted to the content and thereby, to prevent any unwarted effects discounted to the content and thereby.
                                                                              prevent
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           instructions for adding a carrier and for use of the kit. The compo of the invention has antiallergic, antiinflammatory, antiasthmatic,
                                                                      lung, brain, heart, kidney, etc,
it any unwanted effects due to it
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 composition

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention also describes a kit, that comprises: (a) a delivery CC device, in separate containers, (b) the oligonucleotides, (c) instructions for adding a carrier and for use of the kit. The composition CC of the invention has antiallergic, antiinflammatory, antiasthmatic, analysis, hypotensive, immunosuppressive and cytostatic activity, is a CC beta-adrenergic agonist. The composition is useful for preventing or CC treating a respiratory, lung or malignant disease. The administered composition comprises oligo and is administered to reduce the production or availability, or to increase the degradation of the target mRNA or to reduce the amount of target polypeptide present in the lungs. The CC pulmonary obstruction, and/or bronchoconstriction and/or lung conflammation, allergies and/or surfactant hypoproduction are associated with a disease or condition such as pulmonary vasoconstriction, conflammation, allergies and/or surfactant hypoproduction are associated inflammation, allergies, asthma, impeded respiration, respiratory conflammation, allergies, asthma, impeded respiration, respiratory conflammation, allergies, asthma, impeded respiration, respiratory conflammation, emphysema, chronic obstructive pulmonary disease, pulmonary transplantation rejection, pulmonary infections, bronchitis or cancer. The reduced adenosine content of the anti-sense oligos corresponding to the content of the cont
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Best Loc

```
CC surfactant depletion or hyposecretion, when administered to a mammal. The CC oligonucleotides are derived from a gene encoding or regulating CC expression of a target polypeptide associated with lung airway or lung CC dysfunction or cancer and can be anti-sense to the corresponding mRNA. CT he invention also describes a kit, that comprises: (a) a delivery CC device, in separate containers, (b) the oligonucleotides, (c) instructions for adding a carrier and for use of the kit. The composition confidence of the invention has antiallergic, antiinflammatory, antiathmatic, CC analgesic, hypotensive, immunosuppressive and cytostatic activity, is a beta-adrenergic agonist. The composition is useful for preventing or CC treating a respiratory, lung or malignant disease. The administered CC composition comprises oligo and is administered to reduce the production or availability, or to increase the degradation of the target mRNA or to CC radiation, allergies and/or bronchoconstriction and/or lung lumonary obstruction, and/or bronchoconstriction and/or lung lumonary vasoconstriction, allergies and/or surfactant hypoproduction are associated confilammation, allergies, asthma, impeded respiration, respiratory inflammation, allergies, asthma, impeded respiration, respiratory confilammation, emphysema, chronic obstructive pulmonary disease, pulmonary hypertension, emphysema, chronic obstructive pulmonary disease, pulmonary confilament products that free adenosine into the system of the oligonucleotides into products that free adenosine into the system confilation in the target RNA serves to prevent the breakdown of the oligonucleotides into products that free adenosine into the system confilation and confilation in the target RNA serves to prevent the breakdown of the oligonucleotides into products that free adenosine into the system confilation in the target RNA serves to prevent the breakdown of the system confilation in the target RNA serves to prevent the breakdown of the system confilation in the target respective con
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Pharmaceutical composition for treating asthma, has anti-
oligonucleotide containing less percentage of adenosine,
nucleic acids associated with lung airway or lung dysfun
                                                   the oligonucleotides into products that e.g., lung, brain, heart, kidney, etc, t prevent any unwanted effects due to it

Competising oligonucleotides, effective for alleviating composition (a) a result active agent, compositing adenosine sensitivity, levels of adenosine (A) or (A) receptors, compression of a target polyposecretion, when administered to a mammal. The coligonucleotides are derived from a gene encoding or regulating conscious of a target polyposecretion, when administered to a mammal. The coligonucleotides are derived from a gene encoding or regulating construction of a target polyposecretion, when administered to a mammal. The coligonucleotides are derived from a gene encoding or regulating construction of the starget polypositide associated with lung airway or lung constructions for adding a carrier and for use of the kit. The composition of the invention has antiallergic, antiinflammatory, antiasthmatic, considered in the invention has antiallergic, antiinflammatory, antiasthmatic, considered in the composition of the kit. The composition of the invention of the composition is useful for preventing or respiratory, lung or malignant disease. The administered composition comprises oligo and is administered to reduce the production composition, and/or burnerase the degradation of the target mRNA or to reduce the amount of target polypositide present in the lungs. The pulmonary obstruction, and/or surfaceant hypoproduction are associated with a disease or condition such as pulmonary vasoconstriction, condition such as pulmonary vasoconstriction, condition such as pulmonary vasoconstriction, condition, emphysema, chronic obstructive pulmonary disease, pulmonary disease, pulmonary disease, pulmonary conditions, emphysema, chronic obstructive pulmonary disease, pulmonary conditions, present in the target RNA serves to prevent the breakdown of the oligonucleotides into products that free adenosine into the system content of the anti-sense oligos corresponding to the oligonary disease, pulmonary disease, pulmo

This invention describes a novel composition (a) a first active agent, comprising oligonucleotides, effective for alleviating comprising oligonucleotides, effective for alleviating composition, respiratory tract inflammation, allergies and creducing adenosine sensitivity, levels of adenosine (A) or (A) receptors, construction or hyposecretion, when administered to a mammal. The coligonucleotides are derived from a gene encoding or regulating considered with lung airway or lung dysfunction or cancer and can be anti-sense to the corresponding mRNA. Construction of a target polypeptide associated with lung airway or lung confidence, in separate containers, (b) the oligonucleotides, (c) instructions for adding a carrier and for use of the kit. The composition of the invention has antiallergic, antiinflammatory, antiastimatic, analysesic, hypotensive, immunosuppressive and cytostatic activity, is a beta-adrenergic agonist. The composition is useful for preventing or treating a respiratory, lung or malignant disease. The administered composition comprises oligo and is administered to reduce the production or availability, or to increase the degradation of the target mRNA or to reduce the amount of target polypeptide present in the lungs. The complementy obstruction, and/or bronchoconstriction and/or lung inflammation, allergies and/or surfactant hypoproduction are associated with a disease or condition such as pulmonary vasoconstriction. Tespiratory condition rejection, pulmonary infections, bronchtis or cancer. The reduced adenosine content of the anti-sense oligos corresponding to thymidines present in the target RNA serves to prevent the breakdown of the oligonucleotides into products that free adenosine into the system conjugated to the oligonucleotides into products that free adenosine into the breakdown of the oligonucleotides into products that free adenosine into the system conjugated the product of the oligonucleotides into products that free adenosine into the system conjugated the products of the oligonucl
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Nyce JW,

                            CC bronchoconstriction, respiratory tract inflammation, allergies and CC reducing adenosine sensitivity, levels of adenosine (A) or (A) receptors, CC surfactant depletion or hyposecretion, when administered to a mammal. The CC oligonucleotides are derived from a gene encoding or regulating CC oligonucleotides are derived from a gene encoding or regulating CC dysfunction or cancer and can be anti-sense to the corresponding mRNA. CC The invention also describes a kit, that comprises: (A) a delivery CC device, in separate containers, (b) the oligonucleotides, (c) constructions for adding a carrier and for use of the kit. The composition of the invention has antiallergic, antiinflammatory, antiasthmatic, analyssic, hypotensive, immunosuppressive and cytostatic activity, is a beta-adrenergic agonist. The composition is useful for preventing or treating a respiratory, lung or malignant disease. The administered CC composition comprises oligo and is administered to reduce the production or availability, or to increase the degradation of the target mRNA or to creduce the amount of target polypeptide present in the lungs. The CC inflammation, allergies and/or burnfactant hypoproduction are associated with a disease or condition such as pulmonary vasoconstriction, and/or surfactant hypoproduction are associated conflammation, allergies, asthmat impeded reministratory.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Matches

variant comprising a nucleotide sequence containing at least one of the single nucleotide polymorphisms given in the specification, a nucleotide sequence having at least 15 contiguous nucleotides of them, or complements of them. The genes are ADAM19 (a disintegrin and metalloprotease 19, also known as gene 845), NRG2 (neuroregulin 2, also known as gene 847), endophilin 1 (also known as gene 874), endophilin 2 (also known as gene 874), endophilin 2 (also known as gene 987). Also included are a vector comprising the isolated nucleic acid (or alternate splice variant), a host cell containing the vector, an isolated polypeptide encoded by the novel nucleic acid (or alternate splice variant), an included fragment that binds to the polypeptide, pharmaceutical compositions (comprising the nucleic acid or alternate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Keith T,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     transplantation rejection, pulmonary infections, branchits or cancer. The reduced adenosine content of the anti-sense oligos corresponding to thymidines present in the target RNA serves to prevent the breakdown of the oligonucleotides into products that free adenosine into the system e.g., lung, brain, heart, kidney, etc, tissue environment and thereby, prevent any unwanted effects due to it
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              a disintegrin and metalloprotease; neuroregulin 2; SNP; single nucleotide polymorphism; a disintegrin and metalloprotease with thrombospondin typel motif 2; a disintegrin and metalloprotease with thrombospondin typel motif 2; asthma; atopy; obesity; inflammatory bowel disease; respiratory disorder.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New isolated nucleic acid or alternate splice variant, useful for diagnosing and treating a disintegrin and metalloprotease (ADAM) interactor gene-associated disorder, e.g. asthma, atopy, obesity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Human endophilin 2 gene exon B reverse sequencing primer
                                                                                                                                                                                                                                                                                                                                                         The invention relates to an isolated nucleic acid or alternate splice
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   inflammatory bowel
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                11-OCT-2001; 2001US-0328424P
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         11-OCT-2002; 2002WO-US032700

CC interactor gene-associated disorder (or a respiratory disorder) by CC administering the pharmaceutical composition, a transgenic mouse (whose CC genome comprises an introduced null nutation in an endogenous gene that CC is orthologous to a human ADAM gene), making a homozygous transgenic CC knockout mouse, forming a crystal of the isolated polypeptide, a cell CC line comprising the isolated nucleic acid or alternate splice variant, a CC biochip comprising the isolated nucleic acid or alternate splice variant, a CC nucleotides of the nucleic acid, an isolated antisense nucleic acid, concleotides of the nucleic acid, an isolated antisense nucleic acid or concleotides of the nucleic acid, an isolated antisense nucleic acid or concleotide or interactor gene ligand and an isolated nucleic acid or concleotide disorder, an isolated antisense nucleic acid or concleotide disorder, an isolated antisense nucleic acid or concleotide disorder, as sethma, atopy, obesity or inflammatory bowel CC associated disorder, e.g. asthma, atopy, obesity or inflammatory bowel CC disease. The present sequence is a primer used to sequence the regions concleoting polymorphisms in the above genes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 respiratory disorder in a human subject, determining an ADAM or interactor gene pharmacogenetic profile in a human subject, identifying an orthologue of a human ADAM or interactor gene, treating an ADAM or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  the binding of the antibody to an ADAM gene amino acid sequence), a learning and interactor gene amino acid sequence (comprising the antibody or antibody fragment, and at least one component to detect the binding of the antibody to the interactor gene amino acid sequence), diagnosing an ADAM or interactor gene-associated disorder or a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          splice variant, vector, polypeptide or antibody, and a carrier, excipient or diluent), a kit for detecting a disintegrin and metalloprotease (ADAM) gene nucleotide sequence (comprising the isolat nucleic acid or alternate splice variant, antibody or antibody fragmen and at least one component to detect the hybridisation of the variant to binding of the antibody to an ADAM gene amino acid semicance of the variant to be sent to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            to detect the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      isolated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     kit
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ဓ္

### WPI; 2004-008994/01.

generating antisense RNA and DNA, New isolated nucleic acid encoding a PRO polypeptide, e.g. PRO4993 or PRO337, useful in molecular biology, chromosome and gene mapping, in and in gene therapy.

#### Example 114; SEQ ID ğ 577; 460pp; English.

CC transembrane protein; having at least 80% amino acid sequence identity to an amino acid sequence chosen from 94 fully defined sequence as given compiled, a pro extracellular domain with or without its associated signal competide, a pro extracellular domain with or without its associated signal competide). Also included are nucleic acids encoding the properties grant toned above, a vector comprising a pro nucleic acid; a comprising the vector and producing pro, a chimaeric molecule comprising the vector and producing pro, a chimaeric molecule comprising the vector and producing pro, a chimaeric molecule comprising pro fused to a heterologous amino acid sequence, and an anti-pro comprising propertide in a sample suspected of containing Provided a provided. CC polypeptide in a sample suspected of containing Provided provided provided. Provided pr The invention relates to an isolated PRO polypeptide (secreted or transmembrane protein) having at least 80% amino acid sequence identity

The polypeptides are useful for inhibiting tumour growth, retinal disorders, sports-related joint problems, articular cartilage defects, osteoarthritis or rheumatoid arthritis, wound healing and hearing loss in mammals. The present sequence is a Tagman PCR primer used investigate PRO gene amplification in certain tumour cell lines.

The invention relates to an isolated PRO polypeptide (secreted or transmembrane protein) having at least 80% amino acid sequence identity to an amino acid sequence chosen from 94 fully defined sequences as given in the specification (including PRO lacking its associated signal peptide, a PRO extracellular domain with or without its associated signal peptide). Also included are nucleic acids encoding the PRO proteins mentioned above, a vector comprising a PRO nucleic acid), a host cell comprising the vector and producing PRO, a chimaeric molecule comprising PRO fused to a heterologous amino acid sequence, and an anti-PRO antibody. PRO337 polypeptide is useful for detecting a PRO4993 polypeptide. Similarly, PRO4993 polypeptide is useful for detecting PRO493 polypeptide.
                                                                                                                                                                                                                                                                                                 New PRO nucleic acid, useful for treating e.g. lung or breast osteoarthritis, rheumatoid arthritis, obesity, diabetes, hyperinsulinemia, hypoinsulinemia or wounds.
                                                                                                                                                                                                                                                                                                                                                                                  WPI;
                                                                                                                                                                                                                                                              Example 114; SEQ

New PRO polypeptide useful for treating peripheral neuropathy, or neuropathies associated with systemic disease such as post-polio or acquired immunodeficiency syndrome-associated syndrome. syndrome

Example 114; SEQ B NO 577; 459pp; English.

The invention relates to an isolated PRO polypeptide (secreted or transmembrane protein) having at least 80% amino acid sequences as given to an amino acid sequence chosen from 94 fully defined sequences as given in the specification (including PRO lacking its associated signal peptide, a PRO extracellular domain with or without its associated signal comprision, a protein in the protein and producing properties acids encoding the PRO proteins mentioned above, a vector comprising a PRO nucleic acid), a host cell comprising the vector and producing PRO, a chimacric molecule comprising comprising the vector and producing PRO, a chimacric molecule comprising profused to a heterologous amino acid sequence, and an anti-PRO comprising the vector and producing PRO, a chimacric molecule comprising profused is useful for detecting a PRO4993 polypeptide in a sample suspected of containing PRO4999 polypeptide. Similarly, PRO4993 polypeptide is useful for detecting profuse polypeptide, and PRO1559 polypeptide is useful for detecting profuse pr

PRO4993 polypeptide or anti-PRO337 collapset one biological activity of the cell expressing PRO337 polypeptide, where the cell is killed. PRO337 polypeptide is useful for modulating at least one biological activity of the cell expressing PRO393 polypeptide is useful for modulating the biological activity of the cell expressing PRO493 polypeptide is useful for modulating the biological activity of the cell expressing PRO493 polypeptide or an anti-PRO1559 polypeptide; and PRO1559 polypeptide or anti-PRO725, anti-PRO700 or anti-PRO739 polypeptide is useful for modulating the biological activity of the cell expressing PRO739 polypeptide or anti-PRO725, anti-PRO700 or anti-PRO739 polypeptide is useful for modulating the biological activity of the cell expressing PRO725, PRO700 or PRO739 polypeptide. The polypeptides are useful for inhibiting tumour growth, retinal disorders, sports-related joint problems, articular cartilage defects, osteoarthritis or rheumatoid arthritis, wound healing and hearing loss in mammals. The present sequence is a Taqman PCR primer used investigate PRO gene amplification in certain tumour cell lines.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Best Local Similarity

CC in the specification (including PRO lacking its associated signal CC peptide). Also included are nucleic acids encoding the properties in cluded are nucleic acids encoding the properties of included are nucleic acids encoding the properties of mentioned above, a vector comprising a PRO nucleic acid), a host cell CC comprising the vector and producing PRO, a chimaeric molecule comprising CC PRO fused to a heterologous amino acid sequence, and an anti-PRO CC antibody. PRO337 polypeptide is useful for detecting a PRO4993 colypeptide in a sample suspected of containing PRO4993 polypeptide. PRO739, PRO700 or PRO739 polypeptide is useful for detecting PRO337 colypeptide. PRO735, PRO700 or PRO739 polypeptide is useful for detecting PRO337 polypeptide. PRO739 polypeptide is useful for detecting PRO725, PRO700 or PRO739. PRO493 polypeptide is useful for detecting PRO725, PRO700 or PRO739. PRO4939 polypeptide is useful for Inking a bloactive molecule to a cell expressing PRO4939 polypeptide. PRO493 polypeptide is useful for linking a bloactive molecule to a cell expressing PRO493 polypeptide is useful for linking a bloactive molecule for lacking a bloactive molecule to a cell expressing PRO493 polypeptide is useful for linking a bloactive molecule to a cell expressing PRO725, CC pRO700 or PRO739 polypeptide. PRO493 polypeptide or anti-PRO3725, CC pro700 or PRO739 polypeptide. PRO493 polypeptide to acil expressing PRO725, CC pro700 or PRO739 polypeptide or anti-PRO493 polypeptide is useful for modulating the biological activity of the cell expressing PRO725, CC pro700 or PRO739 polypeptide or an anti-PRO500 or PRO739 polypeptide is useful for modulating the propertide is useful for modulating the properti
Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      an amino acid sequence chosen from 94 fully defined sequences as given the specification (including PRO lacking its associated signal

New secreted and transmembrane nucleic acid useful for treating inflammation, organ failure, atherosclerosis, cardiac injury, infertility, birth defects, premature aging, acquired immunodeficiency syndrome, or cancer.

# Example 114; SEQ ID NO 577; 463pp; English.

The invention relates to an isolated PRO polypeptide (secreted or CC transmembrane protein) having at least 80% amino acid sequence identity to an amino acid sequence from 94 fully defined sequences as given in the specification (including PRO lacking its associated signal compiled). Also included are nucleic acids encoding the PRO proteins mentioned above, a vector comprising a PRO nucleic acid), a host cell comprising the vector and producing PRO, a chimaeric molecule comprising CC PRO fused to a heterologous amino acid sequence, and an anti-PRO CC polypeptide in a sample suspected of containing PRO4993 polypeptide. CC polypeptide in a sample suspected of containing PRO4993 polypeptide. CC polypeptide. PRO725, PRO700 or PRO739 polypeptide is useful for detecting PRO337 polypeptide to a cell expressing PRO337 polypeptide is useful for detecting PRO3559 polypeptide to a cell expressing PRO337 polypeptide. The bioactive molecule to a cell expressing PRO337 polypeptide is useful for linking a consactive molecule to a cell expressing PRO337 polypeptide is useful for linking a consactive molecule to a cell expressing PRO337 polypeptide is useful for linking a consactive molecule to a cell expressing PRO337 polypeptide is useful for linking a consactive molecule are useful for linking a bioactive molecule is a cell expressing PRO359 polypeptide; and PRO359 polypeptide is useful for linking a consactive molecule are useful for linking a bioactive molecule to a cell expressing PRO359 polypeptide; and PRO359 polypeptide is useful for linking a consactive molecule are useful for linking a bioactive molecule is useful for linking a consactive molecule are useful for linking a bioactive molecule is useful for linking a consactive molecule are useful for linking a bioactive molecule is useful for linking a cell expressing PRO359 polypeptide; and PRO359 polypeptide is useful for linking a consactive molecule are useful for linking a bioactive molecule to a cell expressing PRO359.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       PRO700 or PRO739 polypeptide. PRO4993 polypeptide or anti-PRO337 coplypeptide is useful for modulating at least one biological activity of the cell expressing PRO337 polypeptide, where the cell is killed. PRO337 polypeptide or anti-PRO4993 polypeptide is useful for modulating the biological activity of the cell expressing PRO4993 polypeptide is useful for modulating the biological activity of the cell expressing PRO700 or PRO739 polypeptide or an anti-PRO1559 polypeptide is useful for modulating the biological activity of the cell expressing PRO1559 polypeptide or an anti-PRO725, anti-PRO700 or anti-PRO739 polypeptide is useful for modulating the biological activity of the cell expressing PRO700 or anti-PRO739 polypeptide is useful for modulating the biological activity of the cell expressing PRO700 or PRO739 polypeptide. The polypeptides are useful for inhibiting tumour growth, retinal disorders, sports-related joint problems, articular cartilage defects, osteoarthritis or rheumatold arthritis, wound healing and hearing loss in mammals. The present sequence is a Tagman PCR primer used investigate PRO gene amplification in certain tumour cell lines.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Query Match

8888888888
transmembrane protein) having at least 80% amino acid sequence identity to an amino acid sequence chosen from 94 fully defined sequences as given in the specification (including PRO lacking its associated signal peptide, a PRO extracellular domain with or without its associated signal peptide). Also included are nucleic acids encoding the PRO proteins mentioned above, a vector comprising a PRO nucleic acid), a host cell comprising the vector and producing PRO, a chimaeric molecule comprising PRO fined to a heterologous amino acid sequence, and an anti-PRO antibody. PRO337 polypeptide is useful for detecting a PRO4993 polypeptide in a sample suspected of containing PRO4993 polypeptide.

                                                                                                              The invention relates to an isolated PRO polypeptide (secreted or transmembrane protein) having at least 80% amino acid sequence identity to an amino acid sequence chosen from 94 fully defined sequences as given in the specification (including PRO lacking its associated signal peptide, a PRO extracellular domain with or without its associated signal peptide). Also included are nucleic acids encoding the PRO proteins mentioned above, a vector comprising a PRO nucleic acid), a host cell comprising the vector and producing PRO, a chimaeric molecule comprising PRO fused to a heterologous amino acid sequence, and an anti-PRO antibody. PRO337 polypeptide is useful for detecting a PRO4993 polypeptide in useful for detecting PRO4993 polypeptide is useful for detecting PRO4993 polypeptide.
                                                                                                                                                                                                                                                                                                                                                Novel PRO polypeptides useful for treating peripheral neuropathy, neuropathies associated with systemic disease such as post-polio syndrome or AIDS-associated syndrome.
                                                                                                                                                                                                                                                                                                                     Example 114; SEQ ID NO 577; 465pp;

## 2004-021572/02.

New nucleic acid encoded a secreted and transmembrane polypeptide, useful for treating e.g. lung or breast tumors, osteoarthritis, rheumatoid arthritis, obesity, diabetes, hyperinsulinemia, hypoinsulinemia or wounds.

## Example 114; SEQ ID NO 577; 456pp; English.

comprise. Also included are nucleic acids encoding the PRO proteins commentioned above, a vector comprising a PRO nucleic acids encoding the PRO proteins comprising the vector and producing PRO, a chimaeric molecule comprising C PRO fused to a heterologous amino acid sequence, and an anti-PRO antibody. PRO337 polypeptide is useful for detecting a PRO493 polypeptide. Similarly, PRO493 polypeptide is useful for detecting PRO493 polypeptide. C Similarly, PRO700 or PRO739, PRO700 or PRO739 polypeptide is useful for detecting PRO493 polypeptide. PRO725, PRO700 or PRO739, PRO493 polypeptide is useful for detecting PRO37 C PRO725, PRO700 or PRO739, PRO493 polypeptide is useful for detecting PRO493 polypeptide is the toxin, radiolabal, or an antibody. The bioactive molecule to a cell expressing PRO337 polypeptide. The bioactive molecule to a cell expressing PRO493 polypeptide is useful for linking a C PRO700 or PRO739 polypeptide are useful for linking a bioactive molecule to a cell expressing PRO493 polypeptide is useful for linking a bioactive molecule to a cell expressing PRO725, C PRO700 or PRO739 polypeptide. PRO493 polypeptide is useful for linking a bioactive molecule to a cell expressing PRO725, C PRO700 or PRO739 polypeptide. PRO493 polypeptide or anti-PRO337 polypeptide or anti-PRO337 polypeptide or anti-PRO339 polypeptide is useful for modulating the biological activity of the cell expressing PRO493 polypeptide is useful for modulating the biological activity of the cell expressing PRO493 polypeptide is useful for modulating the propeptide is useful for modulating the propeptide is useful for modulating the propeptide is useful for modulating the propeptide. PRO725, PRO700 or PRO739 polypeptide or anti-PRO700 or anti-PRO739 polypeptide. PRO725, PRO700 or PRO739 polypeptide. PRO725, PR ansmembrane protein) having at least 80% amino acid sequence identity an amino acid sequence chosen from 94 fully defined sequences as given an amino acid sequence chosen from 94 fully defined sequences as given the specification (including PRO lacking its associated signal ptide, a PRO extracellular domain with or without its associated signal invention relates to an isolated PRO polypeptide (secreted

                                                                                                                                                  The invention relates to an isolated PRO polypeptide (secreted or transmembrane protein) having at least 80% amino acid sequence identity to an amino acid sequence chosen from 94 fully defined sequences as given in the specification (including PRO lacking its associated signal peptide). Also included are nucleic acids encoding the PRO proteins mentioned above, a vector comprising a PRO nucleic acid), a host cell comprising the vector and producing PRO, a chimaeric molecule comprising PRO insed to a heterologous amino acid sequence, and an anti-PRO antibody. PRO337 polypeptide is useful for detecting a PRO493 polypeptide. Similarly, PRO493 polypeptide is useful for detecting PRO337
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Goddard
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Ferrara

hybridization probe or as a therapeutic agent. New secreted and transmembrane PRO nucleic acid, for use as a molecular weight marker for protein electrophoresis, for use in gene therapy, phoresis, as a

Example 114; SEQ ID NO 577; 461pp; English.

Cr. The invention relates to an isolated PRO polypeptide (secreted or cransmembrane protein) having at least 80% amino acid sequences as given con a maino acid sequence chosen from 94 fully defined sequences as given cin the specification (including PRO lacking its associated signal capetide, a PRO extracellular domain with or without its associated signal capetide, a los included are nucleic acids encoding the PRO proteins can mentioned above, a vector comprising a PRO nucleic acid), a host cell comprising the vector and producing PRO, a chimaeric molecule comprising comprising the vector and producing PRO, a chimaeric molecule comprising comprising the vector and producing PRO, a chimaeric molecule comprising comprising the propagation of the teaching a PRO4993 polypeptide is useful for detecting a PRO4993 polypeptide is useful for detecting PRO4993 polypeptide. Similarly, PRO4993 polypeptide is useful for detecting PRO1559 polypeptide, and PRO1559 polypeptide is useful for detecting pro1559 polypeptide to a cell expressing PRO337 polypeptide. The bloactive molecule to a cell expressing PRO337 polypeptide. The bloactive molecule is the toxin, radiolabel, or an antibody. The bloactive molecule coacetive molecule to a cell expressing PRO4993 polypeptide; pRO725, pRO700 or PRO739 polypeptide are useful for linking a bloactive molecule to a cell expressing PRO4993 polypeptide is useful for linking a bloactive molecule. The cell expressing PRO337 polypeptide is useful for linking a bloactive molecule is the cell expressing PRO337 polypeptide; pRO725, pro700 or PRO739 polypeptide. PRO725, pro700 or PRO739 polypeptide. PRO4993 polypeptide is useful for motilating the cell expressing PRO337 polypeptide. PRO725, polypeptide or anti-PRO337 polypeptide. PRO337 polypeptide. PRO339 polypeptide. PRO339 polypeptide. PRO339 polypeptide. PRO339 polypeptide. PRO339 polypeptide. PRO339 poly

The polypeptides are useful for inhibiting tumour growth, retinal disorders, sports-related joint problems, articular cartilage defects, osteoarthritis or rheumatoid arthritis, wound healing and hearing loss in mammals. The present sequence is a Tagman PCR primer used investigate PR gene amplification in certain tumour cell lines.

                                           least two portions by providing a type of nanoparticle-oligonucleotide conjugate, contacting the nucleic acid and nanoparticles to allow hybridisation of the oligonucleotides with the two or more portions of the nucleic acid and observing a detectable change brought about by hybridisation. The oligonucleotides have a sequence complementary to the sequence of at least two portions of the nucleic acid. Hybridisation of the oligonucleotides on the nanoparticles with the nucleic acid results in a detectable change. This sequence represents a linking oligonucleotide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          comprising the vector and producing PRO, a chimae PRO fused to a heterologous amino acid sequence, antibody. PRO37 polypeptide is useful for detect polypeptide in a sample suspected of containing P
                                                                                                                                                                                                                                                                                                                                                                           Detecting nucleic acid used for e.g. diagnosis of diseases, for DNA sequencing, comprises observing detectable change caused by hybridization of nucleic acid with substrate or particle bound

                                                                                                                                                                                                                                                   The invention relates to a method of detecting a nucleic acid with at least two portions by providing a type of nanoparticle-oligonucleotide conjugate, contacting the nucleic acid and nanoparticles to allow hybridisation of the oligonucleotides with the two or more portions of the nucleic acid and observing a detectable change brought about by hybridisation. The oligonucleotides have a sequence complementary to the sequence of at least two portions of the nucleic acid. Hybridisation of the oligonucleotides on the nanoparticles with the nucleic acid results in a detectable change. This sequence represents a linking oligonucleotide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Detecting nucleic acid used for e.g. diagnosis of diseases, DNA sequencing, comprises observing detectable change cause hybridization of nucleic acid with substrate or particle bo

Example 114; SEQ ID ğ 577; 463pp; English.

CC peptide). Also included are nucleic acids encoding the PRO proteins CC mentioned above, a vector comprising PRO, a chimaeric molecule comprising the vector and producing PRO, a chimaeric molecule comprising CC PRO fused to a heterologous amino acid sequence, and an anti-PRO CC PRO fused to a heterologous amino acid sequence, and an anti-PRO CC polypeptide in a sample suspected of containing PRO4939 polypeptide. CC Similarly, PRO493 polypeptide is useful for detecting PRO4939 polypeptide. PRO700 or PRO700 or PRO739 polypeptide is useful for detecting PRO337 CC polypeptide, and PRO1559 polypeptide is useful for detecting PRO155, PRO700 or PRO739. PRO4939 polypeptide is useful for inking a CC pro725, PRO700 or PRO739. PRO4939 polypeptide is useful for linking a CC molecule is the toxin, radiolabel, or an antibody. The bioactive molecule causes death of the cell. PRO337 polypeptide is useful for linking a CC pro700 or PRO739 polypeptide are useful for linking a CC pro700 or PRO739 polypeptide are useful for linking a bioactive molecule to a cell expressing PRO4939 polypeptide; PRO725, CC pro700 or PRO739 polypeptide and pro1559 polypeptide is useful for linking a bioactive molecule to a cell expressing PRO4939 polypeptide; PRO725, CC pro700 or PRO739 polypeptide. PRO4939 polypeptide; PRO725, CC pro700 or PRO739 polypeptide. PRO4939 polypeptide; PRO725, CC pro700 or PRO739 polypeptide or anti-PRO337 polypeptide is useful for modulating the cell expressing PRO4939 polypeptide is useful for modulating the biological activity of the cell expressing PRO4939 polypeptide; PRO725, PRO700 or PRO739 polypeptide or anti-PRO337 polypeptide is useful for modulating the biological activity of the cell expressing PRO4939 polypeptide; PRO725, PRO700 or PRO739 polypeptide or anti-PRO337 polypeptide is useful for modulating the biological activity of the cell expressing PRO4939 polypeptide; PRO725, PRO700 or PRO739 polypeptide or an anti-PRO359 polypeptide; PRO725, PRO700 or PRO739 polypeptide or an anti-PRO359 polypeptide; PRO72 transmembrane protein) having at least 80% amino acid sequence identity to an amino acid sequence chosen from 94 fully defined sequences as given in the specification (including PRO lacking its associated signal peptide, a PRO extracellular domain with or without its associated signal The invention relates to an isolated PRO polypeptide (secreted or

       The invention relates to a method of detecting a nucleic acid with at least two portions by providing a type of nanoparticle-oligonucleotide conjugate, contacting the nucleic acid and nanoparticles to allow hybridisation of the oligonucleotides with the two or more portions of the mucleic acid and observing a detectable change brought about by hybridisation. The oligonucleotides have a sequence complementary to the sequence of at least two portions of the nucleic acid. Hybridisation of the oligonucleotides on the nanoparticles with the nucleic acid results in a detectable change. This sequence represents a linking oligonucleotide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   polypeptide; and PRO1559 polypeptide or anti-PRO725, anti-PRO700 or ant PRO739 polypeptide is useful for modulating the biological activity of the cell expressing PRO725, PRO700 or PRO739 polypeptide. The polypeptides are useful for inhibiting tumour growth, retinal disorders sports-related joint problems, articular cartilage defects, esports-related joint problems, articular wound healing and hearing loss mammals. The present sequence is a Tagman PCR primer used investigate P gene amplification in certain tumour cell lines.
                                                                                                                                                                                                                   Detecting nucleic acid used for e.g. diagnosis of diseases, f DNA sequencing, comprises observing detectable change caused hybridization of nucleic acid with substrate or particle boun
                                                                                                                                                                                                                                                                                 WPI; 2004-059019/06.

The invention relates to an isolated PRO polypeptide (secreted or corransmembrane protein) having at least 80% amino acid sequence identity con a maino acid sequence identity con the specification (including PRO lacking its associated signal copptide). Also included are nucleic acids encoding the PRO proteins comprising the vector comprising PRO acking its associated signal commentioned above, a vector comprising PRO, a chimaeric molecule comprising the vector and producing PRO, a chimaeric molecule comprising comprising the vector and producing PRO, a chimaeric molecule comprising comprising the vector and producing PRO, a chimaeric molecule comprising comprising the vector and producing PRO, a chimaeric molecule comprising comprising the properties in section of the comprising comprising the vector and producing PRO, a chimaeric molecule comprising complypeptide is useful for detecting a PRO, polypeptide is useful for detecting projypeptide. Similarly, PRO493 polypeptide is useful for detecting projypeptide. PRO735 polypeptide is useful for detecting projypeptide. PRO735 pro700 or PRO739 polypeptide is useful for detecting projypeptide is useful for inking a bloactive molecule to a cell expressing PRO493 polypeptide is useful for linking a compressing projypeptide projypeptide. PRO735, pro700 or PRO739 polypeptide proprojour projour projou

The invention relates to an isolated PRO polypeptide (secreted or transmembrane protein) having at least 90 mainto acid sequence identity con a mainto acid sequence chosen from 94 fully defined sequences as given in the specification (including PRO lacking its associated signal cupptide). Also included are nucleic acids encoding the PRO proteins comprising a PRO nucleic acid), a host cell comprising a PRO proteins and producing PRO, a chimaeric molecule comprising PRO, a chimaeric molecule comprising comprising a PRO nucleic acid), a host cell comprising the vector and producing PRO, a chimaeric molecule comprising PRO, a chimaeric molecule comprising PRO, a chimaeric molecule comprising PRO, proteins or proteins of the comprising PRO, and producing PRO, a chimaeric molecule comprising PRO, proteins or proteins amino acid sequence, and an anti-PRO comprising PRO, proteins or proteins or proteins or proteins amino acid sequence, and an anti-PRO comprising PRO, proteins or prot
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 06-MAY-1998;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     polypeptides are useful for inhibiting tumour growth, retinal disorders, sports-related joint problems, articular cartilage defects, osteoarthritis or rheumatoid arthritis, wound healing and hearing loss imammals. The present sequence is a Taqman PCR primer used investigate PR gene amplification in certain tumour cell lines.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Human; ss; PCR; secreted protein; transmembrane protein; PRO; cytostatic; ophthalmological; antiarthritic; osteopathic; antirheumatic; vulnerary; auditory; tumour growth; retinal disorder; sports-related joint problem; articular cartilage defects; osteoarthritis; rheumatoid arthritis; wound healing; hearing loss; primer; in situ hybridisation.

The invention relates to an isolated PRO polypeptide (secreted or transmembrane protein) having at least 80% amino acid sequence ident to an amino acid sequence chosen from 94 fully defined sequences as in the specification (including PRO lacking its associated signal peptide, a PRO extracellular domain with or without its associated speptide). Also included are nucleic acids encoding the PRO proteins mentioned above, a vector comprising a PRO nucleic acid), a host cell comprising the vector and producing PRO, a chimaeric molecule comprising the vector and producing PRO, a chimaeric molecule comprising the vector and producing PRO, a chimaeric molecule comprising the vector sequence, and an anti-PRO antibody. PRO337 polypeptide is useful for detecting a PRO493 polypeptide in useful for detecting PRO4933 polypeptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                 New secreted weight marker
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                2004-033145/03.
                                                                                                                                                                                                                                                                                                                                                                                                                                      marker
                                                                                                                                                                                                                                                                                                                                                       114;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Ää'nx
                                                                                                                                                                                                                                                                                                                                                                                                     reted and transmembrane P
marker and for treating a
insufficiency disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               GENENTECH

                                                                                                                                                The invention relates to an isolated PRO polypeptide (secreted or transmembrane protein) having at least 80% amino acid sequence identity to an amino acid sequence chosen from 94 fully defined sequences as given in the specification (including PRO lacking its associated signal peptide). Also included are nucleic acids encoding the PRO proteins mentioned above, a vector comprising a PRO nucleic acid), a host cell comprising the vector and producing PRO, a chimaeric molecule comprising PRO 1901/PPPTIDE acids encoding the PRO proteins with or without its associated signal peptide above, a vector comprising a PRO nucleic acid), a host cell comprising the vector and producing PRO, a chimaeric molecule comprising PRO fused to a heterologous amino acid sequence, and an anti-PRO antibody. PRO337 polypeptide is useful for detecting a PRO4993 polypeptide. Similarly, PRO4993 polypeptide is useful for detecting PRO49337
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New PRO polypeptide useful for treating peripheral neuropathy, neuropathies associated with systemic disease such as post-polio syndrome or acquired immunodeficiency syndrome-associated syndrome.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          WPI;
                                                                                                                                                                                                                                                                                                                                                                                                                                                     Example 114; SEQ ID NO 577; 454pp; English.

                                                      The invention relates to a kit for diagnosing and treating T-cell CC associated diseases which comprises a panel of nucleic acid primers CC specifically priming and allowing amplification of each Vbeta gene, CC VbetaRNA or cDNA. The kit is useful for diagnosing organ transplant CC rejection and diagnosing and treating T-cell associated diseases. CC including autoimmune diseases, degenerative nervous system diseases. CC graft versus host diseases. Autoimmune diseases include Addison's disease. CC and neoplastic disease. Autoimmune diseases include Addison's disease. CC atrophic gastritis. Degenerative nervous system diseases include Type CC sclerosis and Alzheimer's disease. Hypersensitivity diseases include Type CC interests in the such as contact with allergens that lead to CC allergies, Type II hypersensitivities such as those present in CC Goodpasture's syndrome and Type IV hypersensitivities such as those caused by viruses such as HIV, fungal infections such as those caused by CC caused by viruses such as HIV, fungal infections such as those caused by CC schattosomes, filaria and bacterial infections such as those caused by CC Mycobacterium. Neoplastic diseases include lymphoproliferative diseases such as leukaemias, lymphomas and cancers such as cancer of the brain,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           RESULT 1096

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   S
CC associated diseases which comprises a panel of nucleic acid primers
CC specifically priming and allowing amplification of each Vbeta gene,
CC VbetaRNA or CDNA. The kit is useful for diagnosing organ transplant
CC rejection and diagnosing and treating T-cell associated diseases
CC including autoimmune diseases, degenerative nervous system diseases,
CC graft versus host disease, hypersensitivity diseases, infectious diseases
CC and neoplastic diseases. Autoimmune diseases include Addison's disease,
CC atrophic gastritis. Degenerative nervous system diseases include multiple
CC clerosis and Alzheimer's disease. Hypersensitivity diseases include Type
CC I hypersensitivities such as contact with allergens that lead to
CC dodpasture's syndrome and Type IV hypersensitivities such as those
CC manifested in leprosy. Infectious diseases include viral infections
CC caused by viruses such as HIV, fungal infections such as those caused by

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Addison's disease; atrophic gastritis; degenerative nervous system disease; multiple sclerosis; Alzheimer's disease; hypersensitivity disease; type I hypersensitivity disease; type I hypersensitivity; Goodpasture's syndrome; type II hypersensitivity; leprosy; infections disease; viral infection; type IV hypersensitivity; leprosy; infections disease; viral infection; HIV; fungal infection; Candida, parasitic infection; schistosome; filaria; bacterial infection; Mycobacterium; neoplastic disease; leukaemia; lymphoma; cancer; brain cancer;
                                                                                The invention relates to a kit for diagnosing and treating T-cell associated diseases which comprises a panel of nucleic acid primers specifically priming and allowing amplification of each Vbeta gene, VbetaRNA or CDNA. The kit is useful for diagnosing organ transplant rejection and diagnosing and treating T-cell associated diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         human; T-cell associated disease; Vbeta; autoimmune disease; degenerative nervous system disease; graft versus host disease; hypersensitivity disease; infectious disease; neoplastic disease;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence 20
